PROFESSIONAL SUMMARY

B. Tech graduate (**2026, CGPA: 8.23/10**) transitioning into software development with hands-on project experience building **React/TypeScript** and JavaScript web interfaces, a Java and **Spring Boot CRUD REST API**, and SQL analytics in **PostgreSQL**, and a MySQL-backed persistence layer. Strong foundation in data structures, algorithms, OOP, and SQL, alongside **applied machine learning** in Python. **Coordinated** campus placement operations for **1,500+ students** across 20+ recruitment drives.

TECHNICAL SKILLS

Languages: Java (Core Java, Java 8), SQL, JavaScript (ES6+), TypeScript, Python (Basic)
Backend & Java: Spring Boot (CRUD REST APIs), Spring MVC, Spring Data JPA, Hibernate, Collections, Exception Handling
Frontend: React 18, HTML5, CSS3 (CSS Modules), Vite, IndexedDB, localStorage, DOM Manipulation
Databases & SQL: PostgreSQL, MySQL, Relational Schema Design, Primary/Foreign Keys, Joins, Aggregations, GROUP BY
Core CS & ML: Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks, SDLC, Pandas, NumPy, scikit-learn
Testing & Tools: Git, GitHub, Maven, JUnit 5, Vitest, React Testing Library, CLI AI Agents (Claude Code, GitHub Copilot)

PROJECTS

Opportunity Radar — Job Discovery App | *React 18, TypeScript, Vite, IndexedDB, Vitest* **Live Demo** | **GitHub**

- Built a freshness-first job discovery app in strict TypeScript and React 18 with multi-criteria filters for location, work mode, experience, domain, and minimum pay, plus a deterministic job-fit scoring engine that highlights matched and missing skills.
- Developed an application tracker supporting stage updates, interview dates, custom notes, and CSV export, persisting saved jobs and application stages locally in IndexedDB with optimistic UI updates.
- Added an optional Node.js WebSocket stream with reconnect and offline fallback; built toward WCAG 2.2 AA accessibility with focus traps, live regions, and keyboard navigation, tested using Vitest and React Testing Library.

Vogue Vault — Fashion E-Commerce Frontend | *HTML5, CSS3, JavaScript (ES6+), Vite, localStorage* **Live Demo** | **GitHub**

- Built a responsive, multi-page fashion e-commerce frontend using modular ES6+ JavaScript for product discovery, search, filtering, sorting, product details, and size-aware cart and wishlist management.
- Implemented persistent browser-side state in localStorage, reusable UI and service modules, dynamic pricing and coupon calculations, form input validation, and a simulated checkout flow.
- Used a CLI-based AI coding agent to assist with implementation, debugging, and refactoring; reviewed generated code changes and tested core application flows.

Employee Management REST API | *Java 8, Spring Boot, Spring Data JPA, Hibernate, MySQL, JUnit 5* **GitHub**

- Built a layered CRUD REST API in Java 8 and Spring Boot (@RestController, service layer, and JpaRepository) exposing /api/employee's endpoints to create, read, update, and delete employee records in MySQL.
- Implemented ID lookup checks with runtime exception handling for missing employee records and added a JUnit 5-unit test for the Employee entity.

Online Bookstore Database Analysis | *PostgreSQL, SQL, Relational Database Design* **GitHub**

- Designed a normalized relational schema in PostgreSQL for Books, Customers, and Orders tables with primary/foreign keys and integrity constraints, importing CSV records using PostgreSQL COPY statements.
- Wrote SQL queries using INNER and LEFT JOINs, aggregate functions (SUM, COUNT, AVG, COALESCE), GROUP BY, and HAVING clauses to analyze sales revenue, customer purchasing patterns, book popularity, and stock levels.

Bearing Fault Diagnosis Using Machine Learning | *Python, Pandas, NumPy, scikit-learn (SVM)* **Published Paper (DOI)**

- Built a predictive-maintenance pipeline in Python to detect early-stage faults in rotating-machinery bearings from vibration sensor data.
- Cleaned sensor readings and engineered statistical features with Pandas and NumPy, then trained and tuned an SVM classifier achieving over 95% accuracy on held-out test data.

LEADERSHIP & ACHIEVEMENTS

- **Chief Student Training & Placement Officer (KIT's College of Engineering):** Coordinated placement operations for 1,500+ students across 20+ campus recruitment drives, working with visiting recruiters, faculty, and student candidates.
- **Best Mega-Project Award & Research Co-Author:** Won the Best Mega-Project Award for the ML bearing-fault system; co-authored a paper published in **EPJ Web of Conferences (2026)** and a second paper at TFGET 2026.

EDUCATION

B.Tech in Mechanical Engineering | KIT's College of Engineering (Autonomous), Kolhapur *2022 – 2026* | **CGPA: 8.23 / 10**

CERTIFICATIONS

• Core & Advanced Java (KG Placements) • SQL Certification (Skill-Course) • NPTEL Machine Learning & Deep Learning • Tata Ready Engineer Program • Web Development (CodeWithHarry)
