SUJAL SUNIL KADAM

SOFTWARE ENGINEER | JAVA | BACKEND DEVELOPMENT | DSA

+91 9028574850 | sujalsunilkadam@gmail.com | linkedin.com/in/sujal-sunil-kadam | github.com/sujalkadam | Kolhapur, India

Summary

Software engineer with a solid grounding in Core Java, object-oriented design, and data structures and algorithms, built through independent projects spanning application logic, data processing, and machine learning. Comfortable moving between backend logic in Java and interactive frontends in React, with a habit of breaking problems into modular, testable components.

Technical Skills

- **Languages** Java (Advanced), SQL, JavaScript, Python (Basic)
- **Backend** Object-Oriented Design, CRUD Operations, Exception Handling, File Handling, Modular Architecture
- **Frontend** HTML5, CSS3, React.js (component design, state management)
- **Databases** SQL, DBMS (relational modeling, query design)
- **Core CS** Data Structures & Algorithms, Operating Systems, Computer Networks, Software Engineering, SDLC,Collections Framework, Multithreading
- **Tools** Git, GitHub, Version Control
- **Machine Learning** Data Cleaning, Feature Engineering, Model Training, Classification (SVM), Pandas, NumPy
- **Currently Learning** Spring Boot, REST APIs, JUnit

Projects

Bearing Fault Diagnosis using Machine Learning · *Python, Pandas, NumPy, SVM*

- Built a predictive-maintenance pipeline that flags early-stage faults in rotating machinery bearings from vibration sensor data.
- Cleaned and transformed raw sensor readings into engineered features, then trained and tuned an SVM classifier to push accuracy above 95% on held-out test data.
- Co-authored two peer-reviewed papers documenting the methodology; the project was recognized with a Best Mega-Project award.

Local Skill Exchange Platform · *Java, Object-Oriented Design*

- Designed a peer-to-peer platform in Core Java where users list skills they can teach and skills they want to learn, then get matched against each other automatically.
- Structured the system around separate classes for user profiles, skill listings, and the matching engine, applying encapsulation and abstraction so each piece could be modified independently.

Employee Management System · *Core Java, File Handling*

- Built a console-based CRUD application for managing employee records, backed by file-based persistence so data survives between sessions.
- Organized the codebase around a single employee model class with clearly defined read/write operations, applying encapsulation to reduce duplication across CRUD flows.

Notes Application · *React.js, JavaScript*

- Built a single-page notes app in React with component-based state management for real-time create, edit, and delete functionality.

Experience

Project Engineer Intern · *HVAC Company*

- Worked alongside engineering and site teams to keep HVAC installation projects on schedule, diagnosing on-site technical issues and working through root causes methodically.
- Took ownership of project documentation, ensuring specifications and progress notes stayed accurate for other teams relying on them.

Achievements & Leadership

- Co-authored two peer-reviewed research papers in machine learning, covering feature engineering and fault classification methodology.
- Awarded Best Mega-Project for the ML-based bearing fault diagnosis system.
- Served as Chief Student Training & Placement Officer, coordinating placement operations for a graduating batch of 1,500+ students and running 20+ campus recruitment drives.

Education

Bachelor of Technology, Mechanical Engineering · *KIT's College of Engineering, Kolhapur* 2022 – 2026

CGPA: 8.23/10

Certifications

Infosys DBMS & SQL Certification | NPTEL Machine Learning & Deep Learning | Tata Ready Engineer Program | Python AI Tools Workshop (BE10X)
